## EIB – Microsoft SharePoint

Office SharePoint Server 2007 is an integrated suite of server capabilities that can improve organizational effectiveness by providing comprehensive content management and enterprise search, accelerating shared business processes, and facilitating information-sharing across boundaries for better business insight.

Microsoft Office SharePoint Server 2007 provides a single, integrated location where employees can efficiently collaborate with team members, find organizational resources, search for experts and corporate information, manage content and workflow, and leverage business insight to make better-informed decisions.

- [Collaboration](#) Allow teams to work together effectively, collaborate on and publish documents, maintain task lists, implement workflows, and share information through the use of wikis and blogs.
- [Portals](#) Create a personal MySite portal to share information with others and personalize the user experience and content of an enterprise Web site based on the user's profile.
- [Enterprise Search](#) Quickly and easily find people, expertise, and content in business applications.
- [Enterprise Content Management](#) Create and manage documents, records, and Web content.
- [Business Process and Forms](#) Create workflows and electronic forms to automate and streamline your business processes.
- [Business Intelligence](#) Allow information workers to easily access critical business information, analyze and view data, and publish reports to make more informed decisions.

## Integration with 2007 Microsoft Office System

Office SharePoint Server 2007 is designed to work effectively with other programs, servers, and technologies in the 2007 Office release. For example, with Microsoft Office PowerPoint 2007, you can create a slide library on an Office SharePoint Server 2007 site that allows other users to pick specific slides for their own presentation and receive notifications and updated versions when the slides have been modified.
